# Recovery 360°

Integrated care for behavioral health  
and substance abuse problems

At OhioGuidestone we recognize the need for on-going treatment to recover from behavioral health and addiction disorders. So often our clients are dealing with both addiction and mental health issues, but have only been treated for one disorder, or have needed to receive services from two different providers to treat both issues. This approach does not support the evidence for effective treatment.

Instead, we utilize evidence-based therapeutic approaches and integrated treatment approaches that focus on recovery management to help our clients get and stay well. We provide a variety of services to adults and adolescents, individualized to meet the needs of our clients, allowing us to provide the appropriate mix and intensity of services to provide maximum benefit to each individual client
